Doctoral Dissertation

如何降低護理人員離職率：從新進護理人員到資深護理人員

How to Reduce Nurses' Turnover Intentions: From New
Nurses to Experienced Nurses

ACKNOWLEDGEMENTS

This dissertation was successfully completed thanks to all of the people who supported me. Firstly, I would like to thank all Professors in Graduate Institute of Business and Management of Chang Gung University, who have provided me important and necessary knowledge during my study.

A special thank goes to my supervisor, Professor Teng Ching-I, for his continuous instruction, supervision and support during my study and dissertation. Professor Teng was always there to listen and to give advice to me from the early preparation of this dissertation. He taught me how to do a research and express the ideas in clear ways. He showed me different ways to approach a research problem and the need to be persistent to achieve any goal. Hence, my learning and research progress program were greatly improved.

Besides my supervisor, I would like to thank the committee members, who gave valuable comments and contributions for my dissertation, from its proposal version to the final one, which significantly helped improve my dissertation.

Last, but not the least, I would like to convey my sincere thanks to my family who supported me during my pursuit of PhD. program in Taiwan. I would like to thank my lab-mates and international friends for unconditional support and encouragement for me during my study and research in Taiwan.

Thank you all for enriching my doctor's journey and my life.

Sincerely yours,
Pham Thi Tuan Linh

摘要

護理人員的缺乏是個醫療產業中國際等級的問題，指出減低護理人員離職意願的研究之重要性。但是，目前很少研究提到護理人員中導師-導生融洽關係，性格與人格，以及專業承諾與頭痛症狀之間的關係如何在護理人員生涯早期、中期、發展完成後影響到護理人員離職意願。因此，本論文旨在解釋(1) 護理人員中導師-導生關係如何影響離職意願；(2) 性格與人格如何影響提高護理人員能力的行為和離職意願等行動；以及(3) 頭痛症狀與專業承諾之間的互相效應影響離職率。本論文透過釐清護理人員離職率的潛在形成機制，為研究文獻貢獻新知識。本論文也為護理管理者提供減低護理人員離職率的新穎見解。尤其是，護理管理者因應創造出促進同事間融洽關係，提高護理人員的自我效能和職業興趣，激發護理人員意願和行動來提升專業能力，並聆聽醫護人員對自己健康議題的擔憂與工作環境，從而有效地保持護理專業工作人數。

關鍵字: 離職意願；護理人員；融洽關係；性格與人格；專業承諾；頭痛症狀

ABSTRACT

Nurse shortage is a global problem in healthcare industry, indicating the importance of research on reducing nurses' turnover intention. However, little is known about how nursing mentor-mentee rapport, temperament and characters, and the interaction between professional commitment and headache, in *early*, *developing* and *post-development* stages of nursing career impact nurse turnover intention. Hence, this dissertation aims to explain (1) how rapport between nurse mentors and nurse mentees impact turnover intention, (2) how temperament and character impact the action to improve professional capabilities and turnover intention, and (3) how the interaction of headaches and professional commitment impact turnover intention. The dissertation contributes new knowledge to the literature by clarifying the mechanism underlying the formation of nurses' turnover intention. This dissertation offers novel insights for nursing managers on how to reduce nurses' turnover intention. Specifically, nursing managers should create work environments that facilitate rapport-building, improve self-efficacy and career interest among nurses, motivate nurses' intention and action to improve professional capabilities, and listen to nurses' concerns about their health issues, thus effectively retaining nurse workforce.

Keywords: Turnover intention; nurse; rapport; temperament and characters; professional commitment; headache
