Introduction	xiv
Foreword	xvi

PART 1 Power Management

Section 1 Power Management Tutorials	3
1 Ceramic input capacitors can cause overvoltage transients	4
2 Minimizing switching regulator residue in linear regulator outputs	7
3 Power conditioning for notebook and palmtop systems	18
4 2-Wire virtual remote sensing for voltage regulators	35
Section 2 Switching Regulator Design	57
5 LT1070 design manual	59
6 Switching regulators for poets	124
7 Step-down switching regulators	142
8 A monolithic switching regulator with 100 μ V output noise	169
9 Powering complex FPGA-based systems using highly integrated DC/DC μ Module regulator systems	225
10 Powering complex FPGA-based systems using highly integrated DC/DC μ Module regulator systems	229
11 Diode turn-on time induced failures in switching regulators	232
Section 3 Linear Regulator Design	249
12 Performance verification of low noise, low dropout regulators	250
Section 4 High Voltage and High Current Applications	267
13 Parasitic capacitance effects in step-up transformer design	268
14 High efficiency, high density, PolyPhase converters for high current applications	272
Section 5 Powering Lasers and Illumination Devices	287
15 Ultracompact LCD backlight inverters	288
16 A thermoelectric cooler temperature controller for fiber optic lasers	308
17 Current sources for fiber optic lasers	319
18 Bias voltage and current sense circuits for avalanche photodiodes	338

Section 6	Automotive and Industrial Power Design	367
19	Developments in battery stack voltage measurement	368
Part 2	Data Conversion, Signal Conditioning and High Frequency/RF	
Section 1	Data Conversion	393
20	Some techniques for direct digitization of transducer outputs	394
21	The care and feeding of high performance ADCs: get all the bits you paid for	406
22	A standards lab grade 20-bit DAC with 0.1ppm/°C drift	414
23	Delta sigma ADC bridge measurement techniques	461
24	1ppm settling time measurement for a monolithic 18-bit DAC	480
Section 2	Signal Conditioning	515
25	Applications for a switched-capacitor instrumentation building block	518
26	Application considerations and circuits for a new chopper-stabilized op amp	532
27	Designing linear circuits for 5V single supply operation	550
28	Application considerations for an instrumentation lowpass filter.	563
29	Micropower circuits for signal conditioning	574
30	Thermocouple measurement.	596
31	Take the mystery out of the switched-capacitor filter	614
32	Bridge circuits	638
33	High speed amplifier techniques	679
34	A seven-nanosecond comparator for single supply operation	804
35	Understanding and applying voltage references	839
36	Instrumentation applications for a monolithic oscillator	850
37	Slew rate verification for wideband amplifiers	868
38	Instrumentation circuitry using RMS-to-DC converters	879
39	775 nanovolt noise measurement for a low noise voltage reference	896
Section 3	High Frequency/RF Design	905
40	LT5528 WCDMA ACPR, AltCPR and noise measurements	906
41	Measuring phase and delay errors accurately in I/Q modulators	910
	Index	917
