Automatic Text Simplification

Synthesis Lectures on Human Language Technologies

Editor

Graeme Hirst, University of Toronto

Synthesis Lectures on Human Language Technologies is edited by Graeme Hirst of the University of Toronto. The series consists of 50- to 150-page monographs on topics relating to natural language processing, computational linguistics, information retrieval, and spoken language understanding. Emphasis is on important new techniques, on new applications, and on topics that combine two or more HLT subfields.

Automatic Text Simplification

Horacio Saggion 2017

Neural Network Methods for Natual Language Processing Yoav Goldberg 2017

Syntax-based Statistical Machine Translation Philip Williams, Rico Sennrich, Matt Post, and Philipp Koehn 2016

Domain-Sensitive Temporal Tagging Jannik Strötgen and Michael Gertz 2016

Linked Lexical Knowledge Bases: Foundations and Applications Iryna Gurevych, Judith Eckle-Kohler, and Michael Matuschek 2016

Bayesian Analysis in Natural Language Processing Shay Cohen 2016

Metaphor: A Computational Perspective Tony Veale, Ekaterina Shutova, and Beata Beigman Klebanov 2016

Grammatical Inference for Computational Linguistics

Jeffrey Heinz, Colin de la Higuera, and Menno van Zaanen 2015

Automatic Detection of Verbal Deception

Eileen Fitzpatrick, Joan Bachenko, and Tommaso Fornaciari 2015

Natural Language Processing for Social Media

Atefeh Farzindar and Diana Inkpen 2015

Semantic Similarity from Natural Language and Ontology Analysis Sébastien Harispe, Sylvie Ranwez, Stefan Janaqi, and Jacky Montmain 2015

Learning to Rank for Information Retrieval and Natural Language Processing, Second Edition Hang Li 2014

Ontology-Based Interpretation of Natural Language Philipp Cimiano, Christina Unger, and John McCrae 2014

Automated Grammatical Error Detection for Language Learners, Second Edition Claudia Leacock, Martin Chodorow, Michael Gamon, and Joel Tetreault 2014

Web Corpus Construction Roland Schäfer and Felix Bildhauer

Roland Schäfer and Felix Bildhauer 2013

Recognizing Textual Entailment: Models and Applications Ido Dagan, Dan Roth, Mark Sammons, and Fabio Massimo Zanzotto 2013

Linguistic Fundamentals for Natural Language Processing: 100 Essentials from Morphology and Syntax Emily M. Bender 2013

Semi-Supervised Learning and Domain Adaptation in Natural Language Processing Anders Søgaard 2013 iv

Semantic Relations Between Nominals Vivi Nastase, Preslav Nakov, Diarmuid Ó Séaghdha, and Stan Szpakowicz 2013

Computational Modeling of Narrative Inderjeet Mani 2012

Natural Language Processing for Historical Texts Michael Piotrowski 2012

Sentiment Analysis and Opinion Mining Bing Liu 2012

Discourse Processing Manfred Stede 2011

Bitext Alignment Jörg Tiedemann 2011

Linguistic Structure Prediction Noah A. Smith 2011

Learning to Rank for Information Retrieval and Natural Language Processing Hang Li 2011

Computational Modeling of Human Language Acquisition Afra Alishahi 2010

Introduction to Arabic Natural Language Processing Nizar Y. Habash 2010

Cross-Language Information Retrieval Jian-Yun Nie 2010

Automated Grammatical Error Detection for Language Learners Claudia Leacock, Martin Chodorow, Michael Gamon, and Joel Tetreault 2010

Data-Intensive Text Processing with MapReduce

v

Jimmy Lin and Chris Dyer 2010

Semantic Role Labeling

Martha Palmer, Daniel Gildea, and Nianwen Xue 2010

Spoken Dialogue Systems

Kristiina Jokinen and Michael McTear 2009

Introduction to Chinese Natural Language Processing Kam-Fai Wong, Wenjie Li, Ruifeng Xu, and Zheng-sheng Zhang 2009

Introduction to Linguistic Annotation and Text Analytics Graham Wilcock

2009

Dependency Parsing

Sandra Kübler, Ryan McDonald, and Joakim Nivre 2009

Statistical Language Models for Information Retrieval

SYNTHESIS LECTURES ON HUMAN LANGUAGE TECHNOLOGIES #32

ABSTRACT

Thanks to the availability of texts on the Web in recent years, increased knowledge and information have been made available to broader audiences. However, the way in which a text is writtenits vocabulary, its syntax—can be difficult to read and understand for many people, especially those with poor literacy, cognitive or linguistic impairment, or those with limited knowledge of the language of the text. Texts containing uncommon words or long and complicated sentences can be difficult to read and understand by people as well as difficult to analyze by machines. Automatic text simplification is the process of transforming a text into another text which, ideally conveying the same message, will be easier to read and understand by a broader audience. The process usually involves the replacement of difficult or unknown phrases with simpler equivalents and the transformation of long and syntactically complex sentences into shorter and less complex ones. Automatic text simplification, a research topic which started 20 years ago, now has taken on a central role in natural language processing research not only because of the interesting challenges it posesses but also because of its social implications. This book presents past and current research in text simplification, exploring key issues including automatic readability assessment, lexical simplification, and syntactic simplification. It also provides a detailed account of machine learning techniques currently used in simplification, describes full systems designed for specific languages and target audiences, and offers available resources for research and development together with text simplification evaluation techniques.
