McGRAW-HILL HANDBOOKS

Handbook of Environmental Engineering Calculations

Second Edition

- New material on fuel cell technologies and air toxic risk assessment
- Calculations presented with fully illustrated steps
- Contains both SI and U.S. Customary units
- ...s of environmental engineering

Thu Vien DHKTCN-TN
KNV.14002170

C. C. Lee • Shun Dar Lin

HANDBOOK OF ENVIRONMENTAL ENGINEERING CALCULATIONS

ABOUT THE EDITORS

DR. C. C. LEE is the Fuel Cell Research Program Manager at the National Risk Management Research Laboratory of the U.S. Environmental Protection Agency in Cincinnati, Ohio.* He has more than 30 years of experience in conducting various engineering and research projects which often involve multimedia environmental issues ranging from air and water pollution control to solid waste disposal. He has been recognized as a worldwide expert in the thermal treatment of medical and hazardous wastes, witness his leading discussions on medical waste disposal technologies at a meeting conducted by the Congressional Office of Technology Assessment. He initiated and served as the Chairman of the First and Second International Congresses on Toxic Combustion Byproducts (ICTCB) in 1989 and 1991, respectively. The ICTCB has been holding its meetings every two years since its creation in 1989. Also, at the initiation of the U.S. State Department, he served as head of the U.S. delegation to the Conference on National Focal Points for Low- and Non-Waste Technology (it was sponsored by the United Nations and held in Geneva, Switzerland on August 28–30, 1978). He has been invited to lecture on various issues regarding solid waste disposal in numerous national and international conferences, and he has authored 18 books and has published more than 175 papers and reports in various environmental areas. Until recently, he was an adjunct professor with the University of Cincinnati in Ohio and was an assistant professor at the North Carolina State University before joining EPA in 1974. He received a B.S. from the National Taiwan University in 1964, and a MS and PhD from the North Carolina State University in 1968 and 1972, respectively.

SHUN DAR LIN is Emeritus faculty, State Water Survey Division of University of Illinois. He received his PhD in Sanitary Engineering from Syracuse University. Dr. Lin holds an MS in Sanitary Engineering from University of Cincinnati and a BS in Civil Engineering from National Taiwan University. Dr. Lin has taught and conducted research since 1960 at the Institute of Public Health of National Taiwan University and is a registered professional engineer in Illinois. He has published nearly 100 articles and reports on water and wastewater engineering. In 1986, Dr. Lin received the Water Quality Division Best Paper Award for "*Giardia lamblia* and Water Supply" from the American Water Works Association. Dr. Lin has over 40 years of experience in teaching, research, field and laboratory work, and practical engineering experience. Dr. Lin is a life member of the American Society of Civil Engineers, the American Water Works Association, and the Water Environment Federation.

**Note*: This book was written and edited by Dr. C. C. Lee in his private capacity. No official support or endorsement by the U.S. Environmental Protection Agency is intended nor should be inferred.

CONTENTS

Contributors xi
Preface xiii

Part 1 Calculations of Water Quality Assessment and Control

Chapter 1.1. Basic Science and Fundamentals 1.3

1. Conversion Factors / *1.3*
2. Prefixes for SI Units / *1.8*
3. Mathematics / *1.8*
4. Basic Chemistry and Physics / *1.31*
5. Statistics / *1.50*

References / *1.69*

Chapter 1.2. Streams and Rivers 1.71

1. General / *1.72*
2. Point Source Dilution / *1.72*
3. Discharge Measurement / *1.72*
4. Time of Travel / *1.73*
5. Dissolved Oxygen and Water Temperature / *1.74*
6. Biochemical Oxygen Demand Analysis / *1.78*
7. Streeter–Phelps Oxygen SAG Formula / *1.80*
8. BOD Models and K_1 Computation / *1.81*
9. Determination of Reaeration Rate Constant K_2 / *1.102*
10. Sediment Oxygen Demand / *1.108*
11. Organic Sludge Deposits / *1.110*
12. Photosynthesis and Respiration / *1.111*
13. Natural Self-Purification in Streams / *1.112*
14. SOD of DO Usage / *1.131*
15. Apportionment of Stream Users / *1.131*
16. Velz Reaeration Curve (A Pragmatic Approach) / *1.137*
17. Stream DO Model (A Pragmatic Approach) / *1.141*
18. Biological Factors / *1.153*

References / *1.162*

Chapter 1.3. Lakes and Reservoirs 1.165

1. Lakes and Impoundment Impairments / *1.165*
2. Lake Morphometry / *1.166*
3. Water Quality Models / *1.169*
4. Evaporation / *1.170*
5. The Clean Lakes Program / *1.175*

References / *1.203*

Chapter 1.4. Groundwater 1.207

1. Definition / *1.207*
2. Hydrogeologic Parameters / *1.211*
3. Steady Flows in Aquifers / *1.220*
4. Anisotropic Aquifers / *1.221*
5. Unsteady (Nonequilibrium) Flows / *1.222*
6. Groundwater Contamination / *1.233*
7. Setback Zones / *1.236*

References / *1.241*

Chapter 1.5. Fundamental and Treatment Plant Hydraulics 1.243

1. Definitions and Fluid Properties / *1.243*
2. Water Flow in Pipes / *1.250*
3. Pumps / *1.275*
4. Water Flow in Open Channels / *1.281*
5. Flow Measurements / *1.297*

References / *1.310*

Chapter 1.6. Public Water Supply 1.313

1. Sources and Quantity of Water / *1.314*
2. Population Estimates / *1.316*
3. Water Requirements / *1.320*
4. Regulation for Water Quality / *1.324*
5. Water Treatment Processes / *1.332*
6. Aeration and Air Stripping / *1.333*
7. Solubility Equilibrium / *1.355*
8. Coagulation / *1.357*
9. Flocculation / *1.363*
10. Sedimentation / *1.367*
11. Filtration / *1.373*
12. Water Softening / *1.382*
13. Ion Exchange / *1.388*
14. Iron and Manganese Removal / *1.402*
15. Activated Carbon Adsorption / *1.406*
16. Membrane Processes / *1.409*
17. Residual from Water Plant / *1.414*
18. Disinfection / *1.418*
19. Water Fluoridation / *1.439*

References / *1.445*

Chapter 1.7. Wastewater Engineering 1.449

1. What Is Wastewater? / *1.450*
2. Characteristics of Wastewater / *1.450*
3. Sewer Systems / *1.457*
4. Quantity of Wastewater / *1.459*
5. Urban Stormwater Management / *1.462*
6. Design of Storm Drainage Systems / *1.464*
7. Precipitation and Runoff / *1.464*
8. Stormwater Quality / *1.468*
9. Sewer Hydraulics / *1.473*
10. Sewer Appurtenances / *1.473*

11. Pumping Stations / *1.477*
12. Sewer Construction / *1.480*
13. Wastewater Treatment Systems / *1.482*
14. Screening Devices / *1.487*
15. Comminutors / *1.490*
16. Grit Chamber / *1.491*
17. Flow Equalization / *1.492*
18. Sedimentation / *1.495*
19. Primary Sedimentation Tanks / *1.507*
20. Biological (Secondary) Treatment Systems / *1.515*
21. Activated-Sludge Process / *1.517*
22. Trickling Filter / *1.574*
23. Rotating Biological Contactor / *1.586*
24. Dual Biological Treatment / *1.598*
25. Stabilization Ponds / *1.598*
26. Secondary Clarifier / *1.605*
27. Effluent Disinfection / *1.611*
28. Advanced Wastewater Treatment / *1.619*
29. Sludge (Residuals) Treatment and Disposal / *1.652*
References / *1.703*

Appendix A. Illinois Environmental Protection Agency's Macroinvertebrate Tolerance List **1.711**

Appendix B. Well Function for Confined Aquifers **1.717**

Appendix C. Solubility Product Constants for Solution at or near Room Temperature **1.723**

Appendix D. Freundlich Adsorption Isotherm Constants for Toxic Organic Compounds **1.727**

Part 2 Solid Waste Calculations

Chapter 2.1. Thermodynamics Used in Environmental Engineering **2.3**

1. Introduction / *2.4*
2. Thermodynamic Terms and Calculations / *2.4*
References / *2.137*

Chapter 2.2. Basic Combustion and Incineration **2.147**

1. Introduction / *2.148*
2. Basic Combustion Principles / *2.148*
3. Basic Mass and Energy Balance Calculation / *2.199*
4. Basic Incinerator Design / *2.220*
5. System Calculations / *2.239*
6. Evaluation of Permit Application Data / *2.294*
References / *2.315*

Chapter 2.3. Practical Design of Waste Incineration 2.317

1. Introduction / *2.317*
2. Combustion Process Calculations / *2.317*
3. Waste Combustion Systems / *2.333*
4. Control of Emissions from Combustion / *2.351*
5. Controlled and Uncontrolled Emission Factors / *2.373*
6. Conversions and Corrections / *2.378*

References / *2.384*

Chapter 2.4. Calculations for Permitting and Compliance 2.387

1. Introduction / *2.387*
2. Calculations of Emissions from the Stack / *2.388*
3. Regulatory Emission Standards and Guidelines / *2.394*
4. Calculations to Confirm Compliance with Standards / *2.400*
5. Environmental Impact of Stack Emissions / *2.414*
6. Environmental Risk Assessment / *2.430*

References / *2.437*

Chapter 2.5. Calculational Procedures for Ash Stabilization and Solidification 2.439

Section 2.5.1. Calculational Procedures for Ash Stabilization / 2.441

1. Overview of Processing and Stabilizing Fly Ash / *2.441*
2. Calculations of Processing and Stabilizing Fly Ash / *2.445*

References / *2.449*

Appendix A. Material Safety Data Sheet / *2.450*
Appendix B. Material Safety Data Sheet. Fly Ash / *2.453*
Appendix C. Material Safety Data Sheet. Mixtures / *2.455*
Appendix D. Material Safety Data Sheet. CFBC Ash / *2.458*
Appendix E. Medical Waste Incinerator. Bottom Ash / *2.461*
Appendix F. Medical Waste Incinerator. Fly Ash / *2.462*

Section 2.5.2. Catalytic Extraction Processing: Calculating Procedures for Assessing Low Grade Material Processing Potential / 2.463

3. Overview of Fundamental Catalytic Extraction Processing / *2.463*
4. Engineering Calculations of Catalytic Extraction Processing / *2.471*

References / *2.488*

Chapter 2.6. Incineration Technologies and Facility Requirements 2.491

1. Introduction / *1.491*
2. Incineration Technology / *1.492*
3. Incineration Technology Summary / *1.537*
4. Resource Recovery System / *1.537*
5. Facility Design Feature / *1.550*
6. Summary of Incineration System / *1.570*

References / *1.572*

Part 3 Air Pollution Control Calculations

Chapter 3.1. Air Emission Control 3.3

1. Introduction / *3.3*
2. Air Pollution Definition / *3.4*
