Java Network Programming

Java Network Programming, Third Edition, brings you up-to-date with the latest features of Java's network APIs. This book discusses all the changes and additions to networking in JDK 1.4 and 1.5 (now christened J2SE 5). It covers everything from networking fundamentals to remote method invocation (RMI), including chapters on TCP and UDP sockets, server sockets, URLs and URIs, multicasting, and special-purpose APIs such as JavaMail. This book shows you how to use JSSE to write secure networking applications and explains how to use the NIO APIs to write ultra high-performance servers. And it covers Java's support for network proxies, web cookies, and URL caching.

Java Network Programming doesn't just explain the APIs: it shows you how to put them to work. This book is full of examples; it contains thousands of lines of working code (all of which are available online), implementing fully functional network clients and servers. Whether you want to write a special-purpose web server, a secure online order taker, a simple multicast agent, or even an email client, you'll find code that you can learn from and borrow.

Whether you're an experienced network developer, a new Java programmer, or someone who just wants to see what's possible, you'll find that *Java Network Programming*, Third Edition is an important part of your library. Once you've started using the Java Networking APIs, the possibilities are only limited by your imagination.

Elliott Rusty Harold is the author of *Cafe au Lait*, an important online resource for Java-related news (<http://www.cafeaulait.org/>). He is the developer of the XOM API, and the author of *Java I/O*, *XML in a Nutshell*, and many other books on Java and XML topics.

"I didn't begin to understand Java networking until I found this book."

—Bruce Eckel, author of *Thinking in Java*

Table of Contents

Preface	xi
1. Why Networked Java?	1
What Can a Network Program Do?	2
Security	16
But Wait! There's More!	18
2. Basic Network Concepts	19
Networks	19
The Layers of a Network	21
IP, TCP, and UDP	27
The Internet	31
The Client/Server Model	36
Internet Standards	38
3. Basic Web Concepts	46
URIs	46
HTML, SGML, and XML	53
HTTP	55
MIME Media Types	59
Server-Side Programs	63
4. Streams	67
Output Streams	68
Input Streams	72
Filter Streams	76
Readers and Writers	91

5. Threads	105
Running Threads	107
Returning Information from a Thread	111
Synchronization	123
Deadlock	129
Thread Scheduling	130
Thread Pools	144
6. Looking Up Internet Addresses	150
The InetAddress Class	152
Inet4Address and Inet6Address	169
The NetworkInterface Class	170
Some Useful Programs	173
7. URLs and URIs	184
The URL Class	184
The URLEncoder and URLDecoder Classes	208
The URI Class	213
Proxies	222
Communicating with Server-Side Programs Through GET	225
Accessing Password-Protected Sites	229
8. HTML in Swing	237
HTML on Components	237
JEditorPane	239
Parsing HTML	248
Cookies	266
9. Sockets for Clients	275
Socket Basics	275
Investigating Protocols with Telnet	276
The Socket Class	278
Socket Exceptions	304
Socket Addresses	305
Examples	306
10. Sockets for Servers	325
The ServerSocket Class	325
Some Useful Servers	342
