PART I: FOUNDATIONS

1 An Introduction to Multivariate Design	1
The Univariate and Bivariate Domain	1
The Tricky Definition of the Multivariate Domain	2
The Importance of Multivariate Designs	4
The General Organization of the Book	6
Recommended Readings	15
2 Some Fundamental Research Design Concepts	17
Samples and Populations	17
Variables	18
Scales of Measurement	19
Roles Played by Variables	24
Independent Variables, Dependent Variables, and Covariates	25
Between-Subjects and Within-Subjects Independent Variables	27
Latent Variables, Measured Variables, and Variates	28
Linking Latent Variables to Measured Variables	29
Degrees of Freedom	31
Statistical Significance	32
Statistical Power	38
Type I and Type II Errors	38
Recommended Readings	42
3. Data Screening	43
Code and Value Cleaning	44
Distribution Diagnosis	45
Dealing With Missing Values	56
Outliers	65
Multivariate Statistical Assumptions	67

Data Transformations	71
Recommended Readings	73
3B. Data Screening Using SPSS	75
The Look of SPSS	75
Numerical Example	76
Data Cleaning: All Variables	76
Screening Quantitative Variables	79
Screening Categorical Variables	97
Results	105
3B Exercises	106
 PART II: THE INDEPENDENT VARIABLE VARIATE	
4A. Bivariate Correlation and Simple Linear Regression	107
The Concept of Relationship	107
Strength of Relationship	114
Pearson Correlation for a Quantitative Variable and a Dichotomous Nominal Variable	118
Range (Variance) Restriction	120
The Scatterplot	121
Simple Linear Regression	127
Recommended Readings	136
4B. Bivariate Correlation and Simple Linear Regression Using SPSS	137
Bivariate Correlation	137
Simple Linear Regression	141
Results	145
4B Exercises	146
5A. Multiple Regression	147
General Considerations	147
The Variables in a Multiple Regression Analysis	148
Multiple Regression Research	148
The Regression Equations	150
The Variate in Multiple Regression	153
A Range of Regression Methods	154
The Standard (Simultaneous) Regression Method	154
Summary of the Solution for the Standard Regression Method Example	163
Step Methods of Building the Model	171
Evaluation of the Statistical Methods	175

Researcher-Controlled Methods of Building the Model	177
Outliers	179
Collinearity and Multicollinearity	180
Suppressor Variables	182
Linear and Nonlinear Regression:	
Completely Linear Models	184
Linear and Nonlinear Regression:	
Intrinsically Linear Models	185
Linear and Nonlinear Regression:	
Intrinsically Nonlinear Models	192
Canonical Correlation Analysis	193
Recommended Readings	195
B. Multiple Regression Using SPSS	197
Data Screening	198
Checking for Multivariate Outliers	198
Setting Up the Standard: Multiple Regression Analysis	205
Interpreting Standard Multiple Regression Output	210
Results	218
5B Exercises	220
A. Logistic Regression	221
The Variables in Logistic Regression Analysis	222
Assumptions of Logistic Regression	222
Coding of the Dichotomous Variables	223
The Logistic Regression Model	224
Evaluating the Logistic Model	238
Recommended Readings	240
B. Logistic Regression Using SPSS	243
Setting Up the Logistic Regression Analysis	243
Results	252
6B Exercises	253
A. Discriminant Function Analysis	255
Discriminant and Logistic Analysis Compared	255
Discriminant and Regression Analysis Compared	256
Assumptions Underlying Discriminant Function Analysis	256
Sample Size for Discriminant Analysis	257
Purposes of Discriminant Function Analysis	257
A Two-Group Discriminant Example	258
Recognizing the Discriminant Design	259
The Discriminant Function	259

Interpreting the Discriminant Function	261
Accuracy of Classification	262
Different Discriminant Function Methods	263
Recommended Readings	265

7B. Two-Group Discriminant Function Analysis Using SPSS 267

Overview of the Study	267
Summary of Canonical Discriminant Functions	270
Classification Statistics	275
Results	277
7B Exercises	278

PART III: THE DEPENDENT VARIABLE VARIATE

8A. Univariate Comparisons of Means 279

The Strategy of Comparing Means	279
Measurement Error	280
The Ratio of Mean Difference to Measurement Error	280
One-Way Designs: Effects of One Independent Variable	283
Two-Way Factorial Designs:	
Two Main Effects and One Two-Way Interaction	288
Three Variations of Factorial Designs	290
Strength of Effect	294
Recommendations	301
Some Examples of Main Effects and Interactions: Overview	301
Example 1: Main Effects Not Significant, Significant Interaction	301
Example 2: Main Effects and the Interaction Are Significant	307
Example 3: Significant Main Effects and a Nonsignificant Interaction	310
The Transition to Multivariate Design	312
Recommended Readings	313

8B. Univariate Comparisons of Means Using SPSS 315

Numerical Example 1: Independent-Samples t Test	316
Results	319
Numerical Example 2: Paired-Samples t Test	319
Results	320
Numerical Example 3: One-Way Between-Subjects ANOVA	321
Results	327
Numerical Example 4: One-Way Within-Subjects ANOVA	328
Results	335
